

Saasmob's **Smart Class** is a self-service, cloud based solution that enables instructors to set-up courses, syllabus, docs, calendar, announcements and discussion forums for a class in minutes. This helps them in reaching out to their students 24x7 instantly through their mobile devices, having instant access to the feedback given by them and increased collaboration between the students. This is available either via the web or via native apps on the iPhone and Android platforms.

Highlights

- Eliminate paper and hours of manual data entry by setting up courses/syllabus in minutes
- Setup and run your assignments instantly and provide result to your students live
- Increased collaboration within your students
- Setup your mobile viewable profile thus increasing your reach

The solutions enables you to:

- Setup courses, syllabus, access control, events and additional content (e.g. podcasts)
- Setup and Manage Announcements
- Setup questions, polls, blogs and allow students to collaborate instantly
- Setup Tests/Assignments that students can take on any device
- Setup Instructors profile and add publications/presentations

Here are the key features of Saasmob's Smart Inspection solution:

Course/Syllabus Setup: Create your own course, set-up access control and activate subscription. This way only courses with valid subscriptions will show up in student searches. Then Setup a single page or multi-page syllabus via WYSIWYG editor. Images/docs/Videos/Podcasts from local file system can be embedded in syllabus as well. Events can also be setup via a Calendar. Course URL can be shared with students for instant access on a browser. Students can browse syllabus, docs, events. Plus they can export events and then import in their favorite calendar that supports iCal format.

Announcements/Discussions: Instructors can add announcements manually and any upcoming events are automatically inserted in announcements with reminders being sent to students based on pre-set guidelines. Students can browse announcements and upcoming events from the announcements tab. Teachers can setup discussions and students can post/respond to messages, questions, polls and blogs.

Assignments/Tests: Do timed tests setup with multiple sections/questions. Attachments/Images can be included in the answers and can be taken on mobile.

Instructor: Setup profile via WYSIWYG editor and upload publications/presentations that can be browsed on mobile.

All of the above functionality is available in the SAAS model, so no costly deployments, no debugging to figure out what went wrong, just setup your class and you will be up and running in 5 minutes.

Why Saasmob

- Lower Total Cost of Ownership (upto 80% less)
- Software-as-a-Service model for lower upfront investment, quicker deployment
- Broadest device support
